# TAURAS GIEDRAITIS
Software Engineering Student

## Contact

### Email
contact@taurasg.com

### Website
taurasg.com

### LinkedIn
linkedin.com/in/taurasg

### GitHub
github.com/TaurasGG

### Location
Kaunas, Lithuania

## Skills

### Programing
Java, C#, C++, Python and more

### Web Development
HTML, CSS, JavaScript, React

### Video Game Development
Unity, Blender (3D modeling)

### Graphics & Video Editing
Adobe Illustrator, Adobe Premiere Pro

## About Me

I'm Tauras Giedraitis - a 4th-year full-stack software engineering student at Kaunas University of Technology in Kaunas, Lithuania. I enjoy working across the full stack, from front-end design to back-end systems, with a strong focus on detail and quality. I am eager to expand my skills in creating applications from scratch and to deepen my experience in game development, where I can merge my technical expertise with my artistic mindset to deliver innovative projects.

## Key Projects

### MindQuest

MindQuest is a daily wellness check platform where users take self-assessment tests, view insights, and read the MindFeed with health-related posts. Developed as a university team project using Java, Spring Boot, MySQL, Thymeleaf, CSS, JS, and HTML, I was responsible for front-end and back-end integration, implementing forms and the MindFeed system, and contributing to project design.

### SolarHop

SolarHop is a mobile Android game that teaches 5th-8th graders physics by exploring the solar system as an alien, unlocking planets with NFC cards, and completing physics-based challenges. Created as a university team project with Unity, Blender, and C#, I contributed by modeling most 3D assets, designing gameplay mechanics, programming level logic, and setting up interactive scenes.

### "Klinika Giedra" Website

An informative website for a family clinic with an admin login to manage news posts and site content. The current one-page version is live, while an improved version is in development. Built with Java, Spring Boot, React, and MongoDB, I handled full-stack development, including admin features, content management, and site structure.
